PROJECTS	Language Technology Platform (LTP) 2013.6 - present Project Homepage: https://github.com/HIT-SCIR/ltp . LTP is a software package that provides Chinese natural language processing pipeline along with web service API. <ul style="list-style-type: none"> • one of the developers and the major maintainer of LTP. • developed 4 modules including Chinese word segmentation, part-of-speech tagging, NER and dependency parsing in a perceptron algorithm framework. • developed the RESTful API and contributed to the development of website (http://ltp-cloud.com).
	ZPar Project 2013.10 - 2014.10 Project Homepage: http://sourceforge.net/projects/zpar/ . ZPar is statistical multi-language parser. ZPar provides integrated systems that perform word segmentation, part-of-speech tagging, dependency parsing or phrase structure parsing. <ul style="list-style-type: none"> • developed transition based non-projective dependency parser. • developed bug fixes.
