PROJECTS

CoNLL 2018 Shared Task: Multilingual Parsing from Raw Text to Universal Dependencies   2018.4 - 2018.6
Our system (HIT-SCIR) was ranked **first** out of 26 submissions according to LAS.

- contributed the ideas of using deep contextualized word embeddings and ensemble.
- developed the treebank concatenation strategies.

Language Technology Platform (LTP)   2013.6 - present
LTP is a software package that provides Chinese NLP pipeline and web service API.

- one of the developers and the major maintainer of LTP.
- developed 4 modules including Chinese word segmentation, part-of-speech tagging, NER and dependency parsing in a perceptron algorithm framework.
- developed the RESTful API and contributed to the development of the website.
